Aleph, manufacturers of wide format printers, has announced the launch of a new range of LaForte wide format inkjet printers, in both versions, fabric for direct printing on textile and paper for sublimation.

The LaForte STUDIO range, designed for textile manufacturers with medium production, achieves a resolution of 1200 dpi for a perfect printing quality. The printers reach up to the speed of 270 sq. m./hour and are equipped with an innovative control software for variable drop management to accentuate the crisp, authentic effect, totally avoiding the dithering effect, mentions the company release. The new software matrix designed for the arrangement of the points are the elements that guarantee an exceptional performance compared to competitors, claims Aleph.

The new range offered by Aleph will be presented at FESPA Eurasia 2016 in Istanbul where the company will also be introducing its new Turkish headquarters. The company is learning each market specifics and delivering high performing solutions and technology in order to spread its products in Europe and outside European borders. Aleph has found a new partner in Athens, Greece.

Founded in 1999, Aleph's solutions include a complete and innovative range of products for the textile printing industry, meeting specific customer requirements and the changing needs of the markets.
