About aleph

aleph specialises in designing and developing advanced direct-to-fabric and direct-to-paper printing solutions.

Founded in 1999 and headquartered at the heart of the Italian textile district of Como, the company has grown to become one of the **leading international players in the digital printing space.**

The company has grown to become a leading provider to textile and visual communications industries at a global level.

Offering cutting-edge adding-value integrated solutions – which range from high-performance digital printers to post printing units, proprietary software and consumables – the company enables its customers to take their businesses to the next level.

Release aleph's newest LAFORTE MY2021 series features the latest developments of the R&D department, which leverages the company's extensive expertise in digital textile, as well as the constant feedback from customers utilising aleph's technologies.

Aleph's Green Policy Focuses On Environmental And Social Sustainability.

The company is committed to develop and deliver **environmentally friendly solutions with a low environmental impact.**

This translates into advanced digital printing platforms displaying simple and sustainable processes and achieving **reduced use of water, energy, and other natural resources.**

While ensuring that the internal manufacturing operations are constantly improved in terms of sustainability, aleph is also committed to choose partners and suppliers that **share the same green vision and green modus operandi.**

With the company steadily focused on innovation, aleph's customers can benefit from cost effective technologies with reduced environmental impact and designed to **increase the users' green reputation.**
